1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-10, 12-25 and 27-30 are rejected under 35 U.S.C. 102(b) as being anticipated by either Fukuda et al.-US 3,666,565 ('565) or Fukuda et al.-US 3,892,592 ('592).

Reference is made to column 1, lines 29-66 of '565 and column 2, lines 56-72; column 3, lines 1-10; column 3, line 49-column 4, line 4.

See the Abstract in '592 along with column 1, lines 12-56; column 3, lines 4-13 and the Example.

Both of the above references teach the use of an aqueous sodium borohydride anolyte used in a fuel cell that has an anode comprising the dual catalysts material where the cathode includes the recited one catalyst material.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

Art Unit: 1745

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 11 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over either '565 or '592 in view of Amendola-US 5,804,329. (Amendola)

Both of the '565 and '592 references set forth all of the claimed subject matter except for the carrier of the borohydride being non-aqueous. Amendola teaches a fuel cell utilizing borohydride as a fuel in a non-aqueous carrier-see column 17, lines 36-47 and claims 4-9. To have utilized a non-aqueous carrier for the borohydride in either '565 or '592 would have been obvious to one of ordinary skill in this art at the time the invention was made so that the fuel cell therein could have been used at low temperatures and so that the cell could be used at specific energies.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John S. Maples whose telephone number is 703-308-1795. The examiner can normally be reached on Monday-Thursday from 6:15-3:45.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan can be reached on 703-308-2383. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9310.
